

Access Switch Selection Criteria

Overview

Pick an access layer switch that (1) offers enough ports for every wired and PoE device you'll add over the next three years, (2) delivers the speed—1 Gbps for general traffic or 10 Gbps for heavy data—to keep users productive, and (3) includes security and management features. Access switches are designed for cost-effectiveness and ease of use and provide the following features:

- High port diversity : Access switches offer a range of port types, such as 10/100/1000BASE-T ports, to accommodate the diverse access needs of various devices. The right Cisco access switch is the one that fits the wiring closet role and device mix over the next. It serves as a critical component of the access layer in a network's hierarchical design.
