

# **After the Wi-Fi fiber optic cable is unplugged**

## Overview

---

- Solutions: Clean connectors and end faces using specialised cleaning tools and solutions, inspect cables for bends or breaks and replace damaged sections, ensure compatibility and proper alignment of fibre optic components. I've checked the network adapter settings, and usually it says that the Ethernet cable is unplugged, which it's not because after a bit more time it'll say "Unidentified network," and then eventually it connects. The ATT guy for one of my neighbors came out and unplugged other homes at the box for our block and left all our houses unplugged. Currently using the default modem/router for ATT (It's an all in one, apparently I HAVE to use this modem/router combo. I now will unplug it at wall and at the unit, and will

Customer: My AT&T fiber is not working Technician's Assistant: Have you tried unplugging your modem and router, then plugging them back in after 1-2 minutes?

Customer: I only. The issue is easy to reproduce: \* Be connected to the internet \* Unplug the fibre optic from the small white box \* Eventually, the Sky router will realise it is not connected to the internet and its LEDs will change to "green orange green orange" \* The internet will then not work at all, not via.
