

Analysis Chart of Optical Fiber Communication Development Level

Overview

The Fiber Development Index (FDI) tracks and benchmarks fiber development across 93 countries and territories. Especially since the COVID-19 pandemic, governments around the world now understand the social and financial benefits of investing in high-quality broadband networks. Since the pandemic, broadband access has become more important than ever for the consumer, with activities such as working/schooling from home, video communication, smart home use cases, and online entertainment becoming a standard part of everyday life in many countries. This has several advantages, from reducing the cost, internal compute power, and battery size of devices, to consistently using the latest software version and being able to support advanced technologies such as big data analytics and new cloud-based applications/use. As enterprises turn to digital technologies and ways of working, their capacity needs to increase exponentially over the next five years. The goal is to collect, store, and analyze data, generating valuable information for the organization to make faster, better decisions.

Analysis Chart of Optical Fiber Communication Development Level

Optical Fiber Communications 101: Key Concepts

The optical spectrum evaluated in optical fiber communication is a graph in which the components of light are broken down into wavelengths and the horizontal axis
