

# Are fiber optic terminal boxes shared

## Overview

---

While a fiber optic termination box serves a single user or only a limited number of users (less than five), a Fiber Distribution Box is designed to provide fiber access for multiple users. Architectural Perspective: Placed in the Access Layer FTTx access network boxes are fiber distribution enclosures used to organize, protect, and manage optical connections within fiber access networks. In short, the terminal box is the last structured node of the Fiber Optic System before service touches the subscriber.
