

Around the electrical distribution box in the house

Overview

A minimum clearance reduces risk and makes it easier for electricians to work with electrical panels, ensuring that there isn't any object near the breaker box, which might result in a dangerous situation. The NEC requires a minimum of 36 inches in front and 30 inches of width on both sides of an electric panel to ensure the electrician has a safe. For the NEC, this means that the service panel has to be in a location that is: 1. Another common question that many people have is whether or not electrical panels are allowed in closets.
