

Asian Optical Cable Vibration Damper

Overview

Spiral Vibration Damper is made of engineering plastic which is high strength, aging resistance and high elastic; it will not cause any mechanical damage to the optical fibre cable. IEC describes the Stockbridge damper as a system consisting of a messenger cable with two masses at its ends and a clamp that supports them; this clamp is attached to the conductor or earthwire with the purpose of reduction of the aeolian vibration on the conductor. Vibration dampers work to cancel damaging fatigue caused by wind-induced vibration. Optical fiber cable hardware are key components in power communication and power transmission and distribution systems, used for fixing, connecting and protecting optical fiber cables, ensuring the stability of optical fiber cables in complex environments and the quality of signal transmission.

Asian Optical Cable Vibration Damper

SVD Series Spiral Vibration Dampers

The document discusses AFL's SVD and AVD Series Spiral Vibration Dampers, which are designed to eliminate damage caused by Aeolian vibration and reduce
