

# **BVR wire connected to distribution box**

## Overview

---

The BV BVR Earth Wire features a flexible design specifically engineered for power distribution cabinets, often called secondary wires. This insulated copper cable utilizes PVC material and works effectively for fixed wiring below 450/750V AC. BV cable refers to a single core PVC insulated wire, which is a commonly used and highly sought-after single-core solid conductor without sheathing cable. It features an inner conductor crafted from high-quality, oxygen-free copper and is insulated with eco-friendly PVC. RV, BV, and BVR cables are commonly used in house wiring applications, particularly in low-voltage electrical installations for residential and commercial buildings. People also call it BVR 450/750V PVC flexible building wire outside certain regions - BVR 450 shows up often in Chinese usage.
