

Bastion host cannot ping core switch

Overview

Ensure that the network ACL rules allow inbound and outbound SSH traffic (port 22) between the bastion host and the porse instance. Both are on same subnet so it should workWhen you try to use "Deploy Bastion" in the portal, you get a "Failed to add subnet" error. At this time, for most address spaces, you must add a subnet named AzureBastionSubnet to your virtual network before you select Deploy Bastion. In this blog, we'll explore how you can ping the main machine from a private instance that has no internet connection and uses a NAT.

Bastion host cannot ping core switch

I can't ping to the switch before I ping the core!

Hi guys, I have an issue in another city watch is I can't ping to the switch it said "time out" BUT I can ping the core and after I ping the core I can ping the switch!!
