

# **Border defense vibration fiber optic temperature sensing cable**

## Overview

---

Fiber Optic Perimeter Intrusion Detection System (FOPIDS) uses fiber optic cables laid along borders—either buried underground or mounted on existing fences. These cables are sensitive to vibrations and physical disturbances caused by walking, digging, climbing, or. Fiber optic pipeline monitoring solutions designed to provide an automated, real-time pipeline monitoring solution for prevention and corrective control of the most undesirable and dangerous events that can occur to pipelines, such as leaks and third party interference (TPI). This is an area where fiber optic sensing technology can be utilized with high effect to increase security and response times.
