

Button Light Guide Module

Overview

The Modulino® Buttons module includes 3 buttons with LEDs to indicate button presses. It is designed to be used with any compatible board with QWIIC, allowing you to build interactive projects without making complicated connections. Modern light guides are used for the transportation of light signals from a circuit-board-mounted LED via a particular route to a defined light-emitting surface, with minimal loss and blurring effect. They offer the electronics developer cost-effective, space-saving and easy-to-mount solutions with. The connection to ASi and AUX (24 V auxiliary power) is made for modules in the active distributor or blue IP67 housing via the yellow or black ASi profile cable with piercing technology or via an M12 plug. Quick and easy assembly and disassembly Robustness to withstand harsh environments Various types of connection: screw clamp, connector, Faston connector or spring terminal Excellent mechanical connection. 3SB2, 16mm Mounting Diameter Pilot Devices Introduction 11/4 Technical Specifications 11/5 PCB Mounting Instructions 11/6 Complete Units 11/7 - 11/8 Pushbutton and Selector Switch Operators 11/9 Key-operated Switches and Indicator Lights 11/10 Holders, Lampholders and Contact Blocks with Tabs 11/11. MENTOR are world-leading experts in the design and in-house manufacture of such components, and - as 1st-tier suppliers to major automotive and other OEMs - MENTOR.
