

# Can optical fiber be plugged directly into a switch for use

## Overview

---

The short answer is no - RJ45 connectors are designed for electrical Ethernet signals, while fiber optics transmit light pulses through glass or plastic. With a fiber ONT can I go straight into a switch?

I have multi gig internet coming into my house via a fiber ONT. I would also like to know what precautions should be taken during cable terminations. As we speak I just have optic fibre (Community Fibre) connected to my Huawei modem / Linksys Velop which will be connected to a new POE switch (need to identify the best model to be compatible with my optic fibre extension project). A fiber optic service will require an "ONT" which connects to the fiber cable, and provides an Ethernet port.

[org/wiki/Network\\_interface\\_device#Optical\\_network\\_terminals](https://www.reddit.com/r/networking/wiki/Network_interface_device#Optical_network_terminals) Some ISP's use ONT's that have integrated routers - its easier for THEM but it gives them more control over.
