

Case Study of a Home Smart Distribution Box

Overview

This paper describes the design, development, and deployment of a smart distribution box enabled by the Internet of Things (IoT) with the goal of improving defect detection, power monitoring, and overall energy management in single-phase residential power applications. Smart home automation system design encompasses the end-to-end process of creating integrated hardware and software solutions that control and monitor home environments. We will show you how to design and sell a smart circuit breaker system in three scalable tiers, meeting any client's budget and transforming you into a true smart electrical advisor. The key to success isn't pushing the most expensive product, but offering a layered, scalable solution blueprint. Utilizing a NodeMCU microcontroller unit, the system integrates a 4-channel relay for load management via voice.

Case Study of a Home Smart Distribution Box

IoT Smart Distribution Box (SDB) for Homestay Energy

A Smart Distribution Box system is proposed, which uses Arduino and IoT technology to monitor and control energy usage in homestays to save on electricity costs. The study aims to align
