

Characteristics of Skeleton-Type Optical Cable Structure

Overview

Skeleton optical fiber ribbon cable has the characteristics of high optical fiber density, small outer diameter saving pipeline resources, good lateral pressure resistance, stable structure, convenient connection, no filling grease, and environmental protection. 1, Outdoor fiber optical cable mainly has the center tube cable, laminate cable and skeleton cable three kinds of structure, according to the use of optical fiber bundle and optical fiber belt and can be divided into ordinary optical cable and optical fiber belt cable and other 6 types. This course also discusses the electromagnetic theory of light and describes the properties of light reflection. It can have different manifestations according to different environments, such as the need for waterproofing, buffering.

Characteristics of Skeleton-Type Optical Cable Structure

A skeleton optical fiber ribbon cable

A technology of optical fiber ribbon and skeleton, which is applied in the field of skeleton optical fiber ribbon and optical cable, can solve the problems
