

Checking the optical attenuation of Huawei switch ports

Overview

Check whether the local and remote optical modules have the same wavelength. Related Information Video Identify a Huawei-Certified Optical Module Run the display transceiver [interface interface-type interface-number | slot slot-id] [verbose]. During use, reading optical module information helps understand its real-time operating status, enabling faster troubleshooting of link abnormalities.

Checking the optical attenuation of Huawei switch ports

Typical Troubleshooting Cases of Optical Module

Check whether the information is consistent with the optical module specifications provided in the product documentation. (For details about the commands for querying port information, see the

Checking the Optical Module Type

Some non-certified optical modules are not designed in compliance with EMC standards and have low anti-interference capability. Additionally, they bring electromagnetic interference to nearby devices.
