

Clamping Module

Overview

Clamping modules are extremely flat diaphragm actuators with short strokes for clamping tasks. Mechanical zero point clamping system with detent function for set-up-time-optimised clamping during non-cutting machining. The modular design of the system enables you to be flexible and you can reuse all hydraulic components. Ideal for modular surface-mounted clamping solutions using a zero-point clamping system.

Clamping Module

Mechanical Zero Point

Modular Pull Clamping System allows quick change fixturing with 0.005mm locating repeatability on CNC machining centers. Quick locating and clamping reduce
