

# **Coal Conveying Cable Tray Corrosion Protection**

## Overview

---

Stainless Steel: Highly resistant to corrosion, ideal for harsh environments. This white paper compares the High Resistance (HR) and Hot-Dip Galvanising (HDG) solutions and highlights the new High Resistance range, ZnAl wiremesh, ZnMg metal cable trays and accessories and ZnNi screws and bolts. However, exposure to harsh environments can lead to corrosion, compromising their structural integrity and safety. Cable trays, which provide vital support and protection for electrical wiring, must be chosen with consideration for the. Grade C8 corresponds to an extreme level of corrosivity, characteristic of coastal marine environments with high salinity, industrial areas with aggressive contaminants or tropical environments with high humidity. Oil and gas facilities subject cable tray systems to a combination of conditions that, together, are more aggressive than any single factor suggests: Chemical spills and vapours.
