Heat fusion

Heat fusion (sometimes called heat welding, butt welding or simply fusion) is a welding process used to join two different pieces of a thermoplastic. This process involves heating both pieces simultaneously

Cold Welding vs Hot Welding: Key Differences and

Cold welding is also suitable for joining dissimilar metals without melting them, but it is limited to simpler joints like lap and butt joints. Hot welding,

Cold fusion , Max-Planck-Institut für Plasmaphysik

What is "cold fusion"? Unlike with "hot fusion", where energy is to be derived by heating atomic nuclei to very high temperatures allowing fusion, here with "cold
