

Color sequence of fiber optic splice tray

Overview

Under the TIA/EIA-598-C standard, the universal 12-color sequence is: 1-Blue, 2-Orange, 3-Green, 4-Brown, 5-Slate (Gray), 6-White, 7-Red, 8-Black, 9-Yellow, 10-Violet, 11-Rose, and 12-Aqua. How to Identify Fibers in High-Count Cables (>12 Fibers) For cables with more than 12 strands (e. The 12-color sequence is applied twice: first to the outer Buffer Tube, and then to the individual Fiber inside it. Fewer errors during splicing: Clear visual cues limit cross-connections and channel interference. You can see the colors and if you look closely, you will see the matching colors of the spliced fibers. It has been developed to accommodate 24 single fusion splices, 72 mass fusion splices or 6 Fi rlok® Splices per tray. When a fiber optic tech splices cables, makes terminations behind patch panels or selects patch cords to interconnect cables or connect electronic equipment, they use color codes to make the proper connections.

Color sequence of fiber optic splice tray

The FOA Reference For Fiber Optics

Cables must be secured to the splice closure and sealed properly. Generally loose tube cables will have the tubes extending from the entrance of the closure to the
