

Connection of the optical power meter

Overview

The basic process is straightforward: turn the meter on, set it to the correct wavelength, clean your connectors, plug in, and read the display. An optical power meter measures the strength of light traveling through a fiber optic cable, giving you a reading in dBm (decibels relative to one milliwatt). REF/dB key: Short press the dB to switch unit, click once nW/dBm/dB to enter the upper clear data, press and hold until REF is displayed on the screen, and set the current optical power as reference value, enter the relative. If you are looking for a low cost device capable of saving and reporting take a look at the RP460 or.

Connection of the optical power meter
