

# **Connection to the power distribution box in the power distribution room**

## Overview

---

Electricity enters the box via the main breaker from the utility or generator. And all the switching and protective devices are installed in the distribution box. Single Phase Distribution Box generally consists of Double Pole MCBs, Single Pole MCBs, and RCCBs. It serves as a central hub for distributing electricity throughout a building, ensuring that power is delivered safely and efficiently to all the required locations.
