Core Technologies of Optical Modules

Overview

At the heart of every optical transceiver lie three essential components, often called the "Three Pillars" of optical communication: Laser — generates light. Modern communication networks rely on optical transceivers to transfer data at the speed of light. At present, the world's AI large-scale models have been released one after another and combined with industry applications to promote the smart upgrade of thousands of industries, and continue to drive the demand for optical chips, optical devices, and optical module in the upstream of the data.

Core Technologies of Optical Modules

Optical module - A comprehensive exploration

Optical modules are mainly packaged by optoelectronic devices TOSA/ROSA, functional circuits and optoelectronic interface components. The
