

Core switch not plugged in

Overview

A device can be pinged from core switch (router) but not the switch it's plugged into. When I saved the configuration, everything stopped working and now we don't know what to do. It is currently using the lan interface, the address that you need to use for the NAT is the WAN outside interface with the public IP - in this case gi0/0/0 The Router is set to use the wrong interface for the NAT overload. Make sure that is reflected in your config: 11-26-2021 12:14 AM - last edited on 11-27-2021 11:50 PM by Translator Hello, not sure if this is a typo ?

According to your configuration, the WAN.
