

Dedicated for circuit breaker distribution boxes

Overview

North American distribution boards are generally housed in enclosures, with the positioned in two columns operable from the front. Some panelboards are provided with a door covering the breaker switch handles, but all are constructed with a dead front; that is to say the front of the enclosure (whether it has a door or not) prevents the operator of the circuit breakers from contacting live electrical parts within.

Dedicated for circuit breaker distribution boxes

Complete Guide For Distribution Boxes Types

These boxes house various circuit breakers, protective devices, and sometimes meters, which collectively manage and distribute electricity to different circuits
