

# **Distribution Box Terminal Temperature Standard**

## Overview

---

According to UL 1059, every terminal block must carry a verified maximum operating temperature, typically ranging from 85°C to 150°C depending on the housing material and conductor size. Pepperl+Fuchs provides a specialized portfolio of Ex d (flameproof) and Ex tb (dust protection by enclosure) certified terminal boxes and junction boxes engineered for reliable use in explosion-hazardous areas. These sturdy solutions are certified according to global standards such as ATEX, IECEx. We are guided by our commitment to do business right, world's most urgent power management challenges. 0), two methods are given for allocating ratings to general purpose junction boxes, to ensure that the heat dissipation introduced by the current flowing in the conductors is correctly attributed when assigning both Temperature Class and Service Temperature to the. They are particularly suitable for applications under extreme environmental conditions, and they provide reliable protection under heavy loads.

## Distribution Box Terminal Temperature Standard
