Aggregation Switch: Increasing the Priority of Special Traffic

Aggregation switches set up stacks to implement device-level backup and increase the interface density and forwarding bandwidth. Before deploying QoS, ensure that the campus network is connected. For

Do I NEED a switch aggregation? : r/UNIFI

No, you probably don't need a aggregation switch. Most of your traffic is probably between your clients and the internet as opposed to from client to client/server all within the same network.

Ideal Network Configuration

All floors have two switches from where the uplinks goes to one switch (aggregator / core switch) to which untangle (UTM) is connected. Untangle has 3 wan links that is used in load

What Is an Aggregation Switch and How It Works

An aggregation switch sits in the middle tier of a network, collecting traffic from multiple smaller access switches and funneling it upward to the core. In a traditional three-tier network
