## **Decentralized Building Automation Distribution Boxes**

Distribution boxes for building automation. Pluggable system solutions for energy-efficient smart buildings with flexible and fast electrical installation.

[Read More](#)

## **Energy efficiency targets**

To unlock these benefits, energy efficiency needs to be improved across the entire energy supply chain, from production to final consumption. EU

[Read More](#)

## **Report on saving potentials in energy transmission and distribution**

This report analyses technically the energy saving potentials in electricity grids including both transmission and distribution parts. The focus is on technical active loss reduction in electricity grid

## **European Commission ErP Ecodesign Directive**

The Directive establishes a framework for setting Ecodesign requirements (such as energy efficiency requirements) for all ErPs in the residential, tertiary and industrial sectors.

## About - Ensmov Plus

Develop a suite of tailored resources and tools for the implementation of Member States' energy savings obligation (Article 8 EED) to address the specific needs of Member States and stakeholders.

[Read More](#)

## The new ecodesign measures explained

These savings correspond to a reduction of over 46 million tonnes of CO<sub>2</sub> equivalent. More importantly, through these measures European households save on average 150 EUR per year. These savings

## Energy Efficiency Directive

First adopted in 2012, the directive was updated in 2018 and 2023, setting rules and obligations for achieving the EU's ambitious energy efficiency targets.

[Read More](#)

## New rules for external power supplies will enable

As a result, European consumers will be able to save on their household bills, help reach significant EU-wide energy savings and reduce

[Read More](#)

## In focus: Energy efficient buildings

To ensure that vulnerable citizens and low-income households benefit from these energy performance improvements, EU countries have agreed that at

[Read More](#)

## **ELECTRICITY SAVING BOX**

Electricity saving box converts most of the reactive electricity into the active one and thus reduces costs. Electricity saving box saves from 15 to 40% of electricity!

[Read More](#)

## **Distribution Grids**

Distribution grids are at the core of the energy transition which takes place at the distribution grids. Covering 10 million km in electricity<sup>1</sup> and 2 million km in gas<sup>2</sup>, distribution networks are the backbone

[Read More](#)

## **Air conditioners**

Where more than one efficiency class is possible, the supplier/manufacturer will declare the energy efficiency class at least in 'Average' season zone; (e) single ducts shall be named 'local air'
