

# **Electrical distribution box enclosure is energized**

## Overview

---

Electrical enclosures are usually made from rigid plastics, or metals such as steel, stainless steel, or aluminum. Polycarbonate, glass-reinforced, and fiberglass boxes are used where stronger cabinets are required. An electrical distribution box is an enclosed panel that receives incoming power and splits it into multiple downstream circuits. Power Distribution Equipment is a term generally used to describe any apparatus used for the generation, transmission, distribution, or control of electrical energy. An electrical enclosure, power box (US), [citation needed] or feeder pillar (UK), [citation needed] is a cabinet for electrical or electronic equipment to mount switches, knobs and displays and to prevent electrical shock to equipment users and protect the contents from the environment.

## Electrical distribution box enclosure is energized

---

### what would cause a breaker box enclosure to be electrified?

You should be able to check between the enclosure and the equipment ground to the panel or the neutral to the panel or the grounding electrode to the ground rod.

## Electrical enclosure

OverviewMaterialsStandardsTerminologyTelecommunicationsFire risk

Electrical enclosures are usually made from rigid plastics, or metals such as steel, stainless steel, or aluminum. Steel cabinets may be painted or galvanized. Mass-produced equipment will generally have a customized enclosure, but standardized enclosures are made for custom-built or small production runs of equipment. For plastic enclosures ABS is used for indoor applications not in harsh environments. Polycarbonate, glass-reinforced, and fiberglass boxes are used where stronger cabinets are required,
