

# Electrification box edge strip

## Overview

---

Cable Edge Protection Strip provides durable edging for metal cut-outs and panel apertures, preventing cable damage and reducing wear caused by sharp edges. Our solution, EMG SOLID® DFT (Dry Film Thickness), uses laser-induced fluorescence spectroscopy to measure the surface weight of transparent and lightly pigmented varnish layers on electrical steel and then visualises this over the entire length and width of the strip. Cable protection systems are designed to safeguard electrical cables and wiring from various external hazards such as mechanical damage, moisture, chemicals, and excessive heat. Electrical safety edges from BBC Bircher Smart Access are used for protecting crushing and shearing points on automatic doors, gates and grids. Connects Edgestrips together to form a continuous seal Edgewise high specification polyester thermosetting tape Bagseals for. / DIMENSIONS Industrial control box, Junction box, Distribution box, Audio amplifier chassis, and more.
