

# **Elevator machine room fiber optic cable**

## Overview

---

The cable uses 900µm tight-buffered optical fibers, offering excellent flexibility, mechanical protection, and superior bending resistance, which is critical for elevator traveling applications exposed to continuous motion. Fiber optic integration is becoming a practical upgrade path for modern elevator systems—but only when it's done with the right cable design. In many buildings, the elevator car is expected to support CCTV video, emergency intercom. This cable solution is tailored for the demanding environment of high-rise buildings, offering a reliable, efficient, and space-saving op : 4-core, 0. When it comes to connecting all these IP devices to a traveling cable, you now have options. The Elevator Traveling Cable 4 Core Fiber 2 Copper Wire Hybrid is a durable and flexible solution designed to deliver both power and data through a single cable in elevator systems. 5 mm<sup>2</sup> power cores, dual CAT6 Ethernet elements, and a 4-core fiber optic unit for ultra-high-speed connectivity in smart elevators.

## Elevator machine room fiber optic cable

---

### 4C Elevator Travelling Fiber Cable Lift Suspension

It is used to connect the lift car and the motor room with high reliability. It can move up and down with the lift car to transmit data signals and monitoring signals. The
