

Emcdatamover optical module model

Overview

At present, PowerMax and VMAX All Flash ships by default, with a single 2-port 10 Gb optical I/O module. To get others, an RPQ, or hardware upgrades or replacements need to be done. The 4-port 8 Gb Fibre Channel module can be ordered separately and added at a later time. The data mover accesses data from the storage groups created on the PowerMax and provides host access using the I/O modules that support the NAS protocols, for example NFS and CIFS. Modern optical modules convert electrical data to optical data to overcome losses associated with electrical transmission. With each generation, they deliver higher data rates, such as 100 Gbps, 400 Gbps, and soon 800 Gbps. Wavelength-tunable narrow-linewidth laser, semiconductor optical amplifiers, IQ modulators, coherent mixer, photodiode array. 6 Tbps (4×400Gbps/λ) O-Band IM/DD Transmission Over 2 km Using Uncooled DFB Lasers on the LAN-WDM grid and Sub-1V Drive TFLN.

Emcdatamover optical module model

Enabling Higher Data Rates for Optical Modules With Small and

This paper demonstrates switching DC/DC buck converter and data-converter designs optimized for optical modules where thermal limitations and space constraints are the most important factors.
