

Explanation of Level 3 Distribution Box

Overview

Level 3 protection is the final barrier of the system, capable of fully eliminating any transient overvoltage that may occur, ensuring the long-term stable operation of sensitive equipment. In lightning protection, the surge protection device in distribution boxes plays a crucial. Let's make a hypothesis: a newly built residential area introduces a 10kV incoming line and builds a distribution room. 4kV to the distribution cabinet (primary distribution cabinet), then the outgoing line is led to the. Handles three-phase power and typically connects to secondary loads such as motors or machinery.
