Explosion-proof distribution box design scheme

Overview

They are designed to contain internal explosions and prevent ignition of surrounding flammable gases or dust. In this article, we will explore three key aspects: certification standards, material selection, and application-specific design considerations. Flameproof enclosure (Ex d IIB+H2), which can be used as feed distribution equipment in control and distribution system (such as distribution box, switch box of main circuit, control box, terminal box or motor starting box etc. Explosion-proof distribution boxes are mainly used in coal mines, fire stations, petroleum, petrochemical installations and textile and other flammable and explosive places.

Explosion-proof distribution box design scheme

Basics of Explosion Protection 2 3 6 5

Manufacturers of explosion protected apparatus are responsible for routine testing, certification and documentation and are required to ensure that each device manufactured complies with the design
