

Exposed copper wire in the upstairs electrical box

Overview

The Occupational Safety and Health Administration (OSHA) and the National Electric Code require wiring to be covered, to prevent contact with conducting materials. The term "exposed copper wire" in a residential setting refers to a conductor that has lost its protective outer layer, leaving the metal core bare. This usually occurs when the insulating jacket of a cord or a cable is compromised due to physical damage, material fatigue, or improper installation. Whether the wires are behind a wall, in a ceiling, or visible near outlets or fixtures, this guide will explain what to do immediately, what causes exposed wire —. **IF YOU ARE NOT A QUALIFIED ELECTRICIAN, you should exercise extreme caution when commenting.**
