

Fiber Optic Cable Sub-item Classification

Overview

Summary: Fibre optic cables come in various types depending on a specific networking demand. They are of the two main categories: single-mode for high-speed transfer over long distances and multi-mode for shorter lengths within buildings or campuses. Multimode fiber cables are generally categorized in five different types: FDDI-grade: This type was among the first types of fiber cables that became widely deployed. Fiber Optics or Optical Fiber is a technology that transmits data as a light pulse along a glass or plastic fiber. This work materialized through the development of good practices, procedures and specifications documents, reflecting a certain state of the art at a given time, and the result of a consensus of all stakeholders (op lable).

Fiber Optic Cable Sub-item Classification

Fiber Cables - coated, tight buffered, fiber-optic cables,

Fiber cables contain one or more optical fibers, which they protect. They are used in telecom systems, for example.
