

Fiber Optic Sensor FSN-11MN

Overview

The FS-N11MN optical fiber sensor is designed for high-accuracy measurements in a wide range of environments. Unlike traditional sensors that often require complex installation and maintenance, the FS-N11MN operates on a fiber optic platform, allowing for non-contact, real-time. FS-N11MN Optical Fiber Sensor: A Revolutionary Solution for Modern Monitoring

With the increasing demand for precision and reliability in industrial and environmental monitoring, optical fiber sensors have emerged as a reliable and versatile tool. *2 One or two more units connected: -20 to +55 °C; 3 to 10 more units connected: -20 to +50 °C; 11 to 16 more units connected: -20 to +45 °C. Get instant answers about specifications, features, and technical details, ideal for finding information in larger documents. Input time 2 ms (ON)/20 ms (OFF) or more (25 ms or more (ON/OFF) when external calibration is selected.

Fiber-optic sensor

A fiber-optic sensor is a sensor that uses optical fiber either as the sensing element ("intrinsic sensors"), or as a means of relaying signals from a remote sensor to the electronics that process the signals
