Fiber head protrusion

Fiber head protrusion

Protrusion growth driven by myosin-generated force

Protrusion growth scaled with motor accumulation, required barbed-end-directed force, and was independent of cargo delivery or recruitment of canonical

Anatomy and Function of the Temporomandibular Joint

Lower head is strongest on protrusion and on lateral deviation to the opposite side. The upper head is attached to the anterior portion of the meniscus and is responsible for the meniscus

Cell migration is dependent on different actin filament structures.

(A) In a cell, motility is initiated by an actin-dependent protrusion of the cell's leading edge, which is composed of armlike structures called lamellipodia and filopodia. These protrusive

Retinal Nerve Fiber Layer Protrusion Associated with Tilted Optic

We therefore hypothesized that retinal nerve fiber layer irregularities are a common feature in adult tilted optic discs and contribute to functional deficits.

[Read More](#)

Protrusion of an Artificial Femoral Head

Chronic dislocation is considered a rare complication after total hip arthroplasty. We have treated a patient with a complication related to chronic

[Read More](#)

Clinical findings for patients with retinal nerve fiber layer

Significance: This study resulted in the identification of an optic nerve head (ONH) feature associated with tilted optic discs, which might potentially contribute to

[Read More](#)

Short-term progression of optic disc and macular changes in optic

Thinning of the surface nerve fibre layer over the optic nerve head was more noticeable in the central, superior and inferior areas after 1 year. These areas correspond to the

location of the

A Closer Look at Fiber Optic Cable Assemblies

Overall performance of the fiber optic connectivity depends on the mechanical characteristics that control alignment and physical contact of the fiber cores. End face geometry is an essential

[Read More](#)

Fiber protrusion lengths dependent on θ_{initial} and d_{tool}

When end milling long fiber reinforced composites, fiber protrusions of the top layers can

occur. The lengths of fiber protrusions found on real workpieces with curved

[Read More](#)

Unraveling the Determinants of Protrusion Formation

Since the MLC kinase inhibitors caused stress fiber dissolution but failed to enhance protrusion formation, dissolution alone was insufficient for the formation or extension of the features.
