

Fiber optic broadband does not require router restrictions

Overview

Fiber optic cables send data using light pulses, which are already digital. Your devices talk digitally, so there's no need to adjust or change the signals. Fiber internet doesn't need a modem because it uses a fundamentally different technology from cable or DSL. These signals require a modem to convert them into digital data for home networks. Think of the ONT as a high-tech bridge between your ISP and your internal network – but engineered.
