

Fiber optic cable diagonal guy wire

Overview

Six-strand 18 or 20 gauge galvanized steel guy wire is recommended for general use (The 18 gauge wire is recommended for high-wind areas and installations over 20 ft. Galvanized steel strand wire can be used as ground wire of overhead line, but also can be used as structural cable, supporting cable, cable, block cable and cable reinforcement core. They reduce forces, distribute loads and boost the durability of these structures. A guy wire is a tensioned cable that was originally called "gei" from the Dutch who used it to fix ships masts.
