

# **Fiber optic channel at 45-degree angle**

## Overview

---

The 45-degree splice presents a compelling alternative to the conventional straight splice by introducing an angled joint. With years of fiber optic experience, our knowledgeable team of fiber specialists understands a wide range of application solutions. MEISU's 45 degree fiber array is a V-groove based fiber array with fiber tip or block end face polished 45 degree (or other similar degree as customer requested) to achieve 90 degree reflection to the beam. Ideal for optical coupling, silicon photonics, PIC packaging, MT/FA interconnection.

## Can fiber tolerate 45 degree elbow? : r/FiberOptics

Fibre can easily be bent a lot more than that. It can bend about 140-150 degrees without breaking. With a really soft bend insensitive jumper like that, you'll be fine with almost a bend radius at like 4" for a
