Fiber optic patch cord SC-ST switching end

Overview

These patch cords have an SC connector on one end and an ST connector on the other, allowing for seamless connectivity between the two types of fiber cables. Hybrid patch cords provide a convenient solution when dealing with mixed networks or transitioning from one connector type to another. Whether back in the late 1990s or today, you will see 8P8C RJ45 type connectors at the end of Ethernet patch cords and keystone jacks mounted in walls running back to patch panels. The T568A and T568B color code has remained the same too, dictating the wiring color code sequence to make proper. A fiber optic connector is a mechanical device that allows two fibers to be joined precisely, enabling light to pass with minimal insertion loss and reflection. At ZION Communication, we design and manufacture a full range of fiber patch cords for: This guide will help you quickly understand the main types of fiber patch cords and how to choose the right solution for your project – and how ZION can support you with stable quality, flexible customization.
