

# Fiber optic patch cord receiving module

## Overview

---

Reliable, high-speed communication between devices up to hundreds of meters or even tens of kilometers apart. NG4access<sup>®</sup> Cabled Modules available in all module sizes and fiber counts up to 864 fibers NG4access<sup>®</sup> Splice Tray Four sizes of interchangeable Propel fiber pass-through adapter packs provide the breadth of capabilities for virtually any configuration. In the optical fiber network system, the correct matching of optical modules and patch cord is very important, which is not only related to the stability of network connection, but also affects the efficiency and quality of data transmission. The fiber transceiver SFP or SFP+ module converts an electrical signal from a switch or router into light. Full patching platforms include FX ECX for LAN environments, FX UHD for high-density fiber channels and the DCX System used primarily in data centers where high amounts of fiber connections and density are the key requirements, as in optical.
