

# **Film Polishing Powder**

## Overview

---

They are made from diamond powders evenly coated on the surface of flexible substrate by adhesives and are often used for lapping and precision polishing of optical fibre pins, semiconducting materials, metal. Applications include microelectronic devices, wafers, ceramics, optical fibers, petrographic, and. Abrasive Lapping Film and Polishing Film is an advanced Polishing medium, coated with meticulously graded minerals like Diamond, Aluminum Oxide, Silicon Carbide, Silicon Oxide, and Cerium Oxide. These minerals are uniformly applied to a high-strength polyester backing, ensuring a consistent and. 3M™ Lapping and Polishing Films deliver exceptional consistency and control for precision finishing and polishing. From the precision required in optical lenses to the aesthetic polish on precious metals, the choice of the right polishing powder can dramatically affect the. Aluminum oxide grinding powders for fine grinding or rough polishing of petrographic specimens, soft metals and their alloys, and cross-sections of electronic devices.
