

Fire-resistant and expanding material for sealing inside cable trays

Overview

Inside a non-combustible fibreglass casing, a high-density concentrate of intumescent components, inert thermal insulators and products with gradual release of water, minimises the depth of sealing necessary to contain the passage of heat: with an insulating thickness for cables up to. Effective protection of cable systems around the world: our tried-and-tested FLAMMOTECT-A and DG-CR 0.7 products are successfully used to protect cables in high-rise buildings, industrial buildings, and offshore facilities as well as in sensitive areas, such as hospitals, airports, production. The KBS® fire protection portfolio includes a wide range of fire protection products of the highest quality that reliably prevent the spread of fire in an emergency and thus permanently meet building code requirements. The sealant is designed for use around cable tray and bunched cable applications. 3M Fire Barrier Moldable Putty+ is a one-part, halogen-free product designed to firestop electrical outlet boxes and a wide variety of through-penetrations including cable, conduit, insulated pipe and metal pipe, which penetrate fire-rated construction.
