

Front of the power distribution box

Overview

North American distribution boards are generally housed in sheet metal enclosures, with the circuit breakers positioned in two columns operable from the front. The three incoming phase wires connect to the busbars via a main switch in the centre of the panel.

Front of the power distribution box

Distribution Boards

It serves as a centralized point where electrical energy from the main power supply is divided and directed to various circuits, controlling the distribution of electricity to different areas or appliances.
