

Fwupdate optical module

Overview

It is essential to know the UID of the module, which adopts the following format: HxxxxxSyyyyyy. FWUpdate is a SW program for PCs running the Windows operating system (from Windows 7 to Windows 11, 32-bit or 64-bit). This document defines a generic way of carrying out firmware updates for GenICam-compliant devices. If the UEFI plugin isn't working correctly, the first thing to check would be the output when called from the command line fwupdmgr tool. When you receive this error it's typically caused by a misconfiguration in fwupdate.

Fwupdate optical module
