

German Optical Separator 6-core

German Optical Separator 6-core

SDM-WDM ROADM based on Direct-Laser-Writing

The compact DLW core separators can reduce the complexity of SDM nodes and will be beneficial for high-speed optical interconnects. (a) The

Germania-Based Core Optical Fibers

Germania-glass-based core silica glass cladding single-mode fibers (Δn up to 0.143) with a minimum loss of 20 dB/km at 1.9 μm were fabricated by the modified chemical vapor deposition

[Read More](#)

Optical Filters

Optical filters are used to control or filter the light depending on its wavelength (color). Depending on its wavelength, the light can be transmitted, absorbed

Large Brillouin gain in Germanium-doped core optical fibers up to a 98

-doped core optical fibers appear as very attractive candidates for enhancing and controlling SBS due to both their high intrinsic SBS gain and their strong light confinement capabilities [4-6]

Portable dielectrophoresis for biology: ADEPT facilitates cell trapping

Viability and phenotype-based separation In addressing the need for a user-friendly DEP device, we show the ability of ADEPT to achieve high efficiency in cell separation.

High-power mid-infrared supercontinuum generation in germania fiber

A high-power supercontinuum (SC) based on germania-core fiber (GCF) is demonstrated in all-fiber configuration. The maximal output power of the SC laser is up to

[Read More](#)

Raman gain properties of germania-based core silica fiber

Raman amplification in singlemode fiber with germania-based core and silica cladding was investigated for the first time. Very short efficient Raman lasers based on this fiber were developed in 1.1 and 1.6
