

Hazards of not having relay protection

Overview

If a Relay is selected that does not have the appropriate type of protection for the atmosphere and the mounting conditions, it may cause problems, such as contact failure. A relay is an electrically operated switch that uses an electromagnet to mechanically operate a switch. Refer to the Safety Precautions for individual Relays for precautions specific to each Relay. However, unauthorised changes to protection relay settings pose a significant threat to the integrity of power systems. This abstract delves into the consequences stemming from such alterations and emphasises the imperative of. They are intended to quickly identify a fault and isolate it so the balance of the system continue to run under normal conditions.

Hazards of not having relay protection

Power System Protective Relays: Principles & Practices

Protective relays and devices have been developed over 100 years ago to provide "lastline" of defense for the electrical systems. They are intended to quickly identify a fault and isolate it so the balance of
