

Homemade methods for building cable trays

Overview

Building a custom cable tray is a great way to keep your space organized. First, gather sturdy materials like metal or plastic, along with tools like a saw and drill. Measure your area to determine the tray size, then assemble it by connecting side and end panels securely. However, I find that cable ties bind when you want to remove, replace or add a cable—and, apart from expensive trunking, the other cable-tidy gadgets I've seen look just as cumbersome or fiddly to use. Therefore, as part of our recent major home office makeover, I decided to make my own cable. Electronic devices multiply faster than rabbits, leaving wires sprawling across surfaces like unruly spaghetti. Keeping your cables neat and out-of-the-way of the moving parts is important to avoid damage, jams and other frustration.
