

How many millimeters is the heat shrink tubing for optical fiber

Overview

This fiber optic heat shrink tube is used to build up two 900 μ m fibers to 3mm jacketed fiber to strengthen and protect the fiber. Center the tubing over the splice, and evenly heat the tubing until it has fully. In order to get an accurate measurement for your heat shrink tubing, you'll need to measure the diameter of both the largest and smallest parts of the wire, cabling, or hose you are trying to bundle. This specialized tubing is designed to protect and secure optical fibers, providing a durable and reliable layer that can withstand the harsh environments commonly encountered in telecommunications.

How many millimeters is the heat shrink tubing for optical fiber

Optic Fiber Heat Shrink Tube

A specially designed crosslinked Clear Heat Shrinkable tubing, with Clear fusion tubing liner, providing SS304 strength member and protection to fiber optical splices.

Heat Shrink

In general, heat shrink should recover at least 10% - 20% to reduce stress and yield the longest service life and thicker walls, resulting in thicker insulation, more abrasion protection, and more strain relief.

A Complete Guide to Heat Shrink Tubing

Can You Cut Heat Shrink Tubing? Can You Use Electrical Tape Instead of Heat Shrink Tubing? How Do You Remove Heat Shrink Tubing? Is Heat Shrink Tubing Waterproof? What Temperature Is Needed For Heat Shrink Tubing? Yes. Standard scissors and a ruler will be adequate in most cases, unless you require an exact length of tubing, in which case use a more precise measuring tool. For thicker tubing you may require wire cutters or pliers. Do not attempt to cut tubing lengthwise as this will affect its strength and moisture-proofing and could also encourage tearing. How To Select The Correct Size Of Heat Shrink Tubing

Heat shrinkable tubing is primarily available in 2:1 or 3:1 shrink ratios meaning the tubing has been expanded to twice or three times its fully recovered size.
