

Overview

You can generally expect a power distribution box to last anywhere between 8 to 15 years, depending on the application it's being used for, the environment it's operating in, and how frequently it's serviced. Rubber boxes which spend their lives indoors are much more likely to have a longer. Smart distribution boxes integrate modern technology with electrical systems, featuring sensors and advanced monitoring tools. They provide real-time data on power consumption, circuit health, and predictive maintenance, which is particularly valuable in industries requiring high uptime, such as IT.
